They give example that before Paythagoras publish his famous theorem about geometry we the same thing is given by 'Bodhyana' as audhayan Sulv Sutra (1000 BC) is today known as the Pythagorus theorem, which states that in a right-angled triangle, the square of the hypotenuse is equal to the sum of the squares of the other two sides. Dr.Borase sir also focs on inspiring journey of great Srinivasa Ramanujan and work. He said that we should inspire form such a great mathematician and should try to discovered new and intersting thing in Mathematics. We should teach and learn Mathematics in more inovative way.

Pythagorus Theorem

Satisfies the equation below:

$$a^2 + b^2 = c^2$$

Pythagorean triplets in Bodhayana: (3,4,5), (5,12,13)

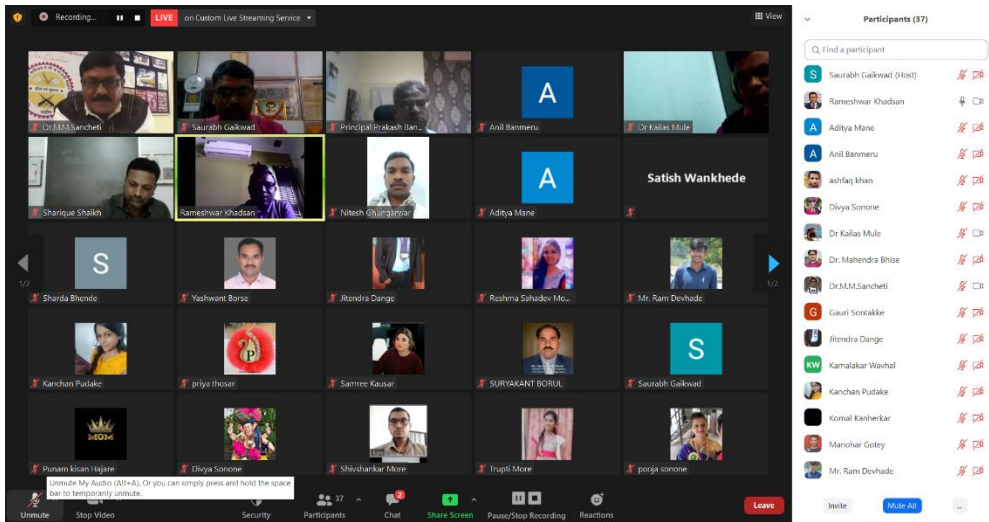

A Theorem from Manava-sulvasutra

आसामभयव्यगुणं विकारां विप्रोणे तु समस्य चर्गुलं वस्तुधर्मं षड्विदे विदुः षडे, षडे

Multiply the length of a right-angled triangle by the lowest length and the breadth by the breadth, the square root of the sum of these two results give the hypotenuse. This is already known to the scholars.

$$AB^2 + BC^2 = AC^2$$
